

Employee Experience Platform

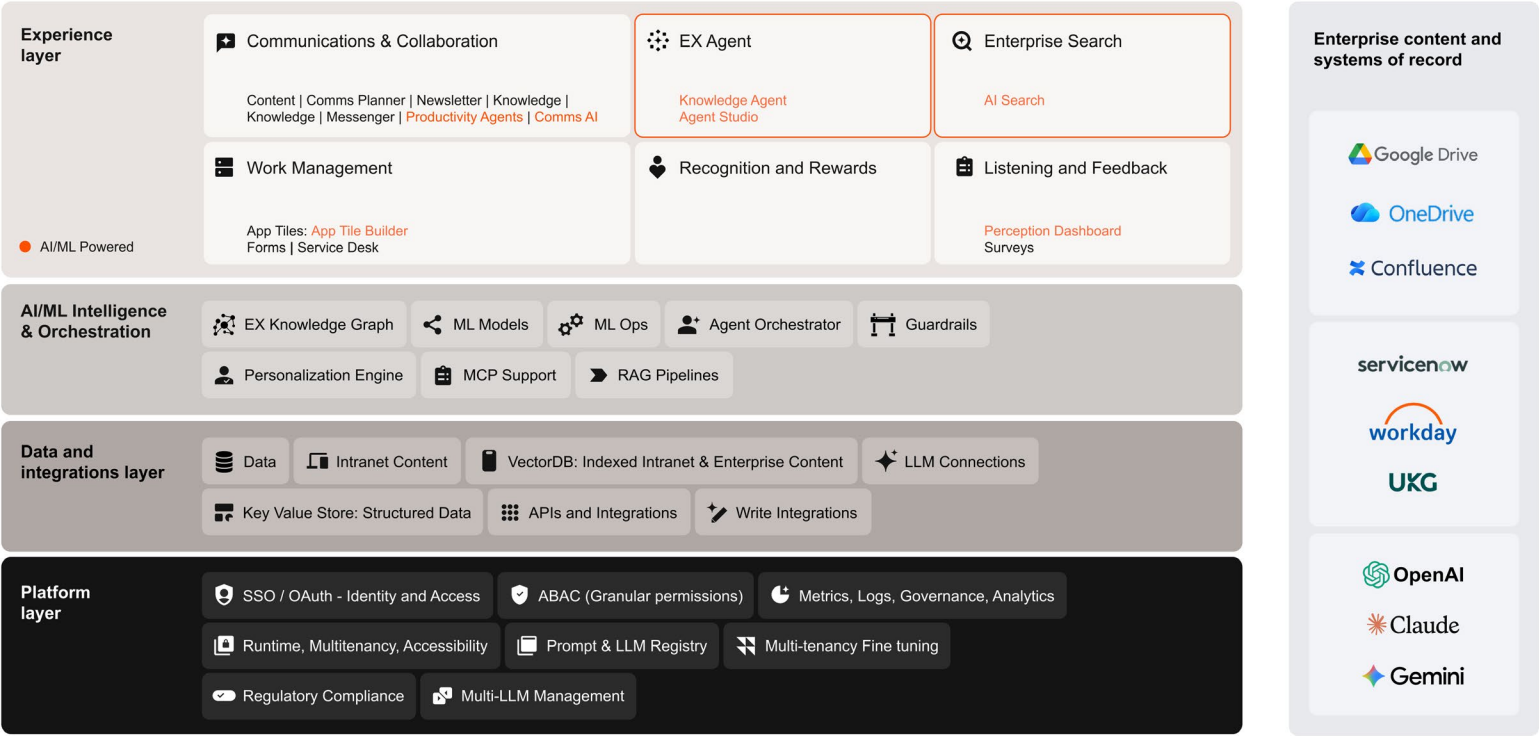

Simpplr’s Employee Experience Platform, a modern, AI-powered intranet is built on a cloud-native, modular, multi-tenant foundation that simplifies complexity while ensuring enterprise-grade security, performance, and scalability. As the digital work hub for employees, Simpplr is experienced through the Experience Layer, which consists of Communication and Collaboration products (e.g., Sites, Newsletter, Messenger, Comms Planner, etc.), Enterprise Search, EX (Employee Experience) Agent, Work Management products (e.g., App Tiles, Forms, etc.),

Recognition and Rewards, and Listening & Feedback. These products help users stay informed about company vision and news, collaborate across teams, improve productivity, access enterprise content, manage daily work, and automate routine tasks.

These experiences are driven by the AI/ML Intelligence & Orchestration Layer, which includes the EX Knowledge Graph, machine learning services, AI guardrails, and a personalization engine that delivers relevant, context-aware experiences to every user.

Underpinning this intelligence is the Data & Integration Layer, which unifies data from Simpplr’s intranet and connected enterprise systems. All of this is built on a core Platform Layer that ensures robust governance, security, and performance—providing IT teams with a scalable, extensible, and compliant foundation for the modern digital workplace.

Platform architecture

About Simpplr

Simpplr is the AI-powered platform that unifies the digital workplace — bringing together engagement, enablement, and services to transform the employee experience. Learn more at simpplr.com.
